### Specifications

The Hazard module contains information about the different types of hazards employees may encounter at your facility. The Hazard module is used throughout Facilligence to identify hazards and apply them to equipment, parts, tools, and locations. Hazards can include materials posing a threat to human health or the environment, as well as dangerous attributes, such as high voltage or confined spaces. The Hazard module is used on items and locations to identify potential risk and ways to stay safe. These are carried onto a workorder to satisfy "Right to Know" OSHA standards and regulations. Updating this information should be a regular task that a manager or supervisor performs so that all hazard information is current and employees are kept out of harm's way. Facilligence helps keep this information available to you at the click of a button. Chemical Inventory is integrated into Hazard Management as is Failure Analysis and Tracking. While being workorder centric, Facilligence links all related hazard and failure data and makes the relevant information available any time and from anywhere. The goal is to inform the mechanic or technician of a hazard in advance of the point-of-risk and to respond to hazards and failure in a proactive way.

## Comprehensive - Integrated Hazard Management

**Facilligence**  
Hazard Management

Facilligence makes hazard awareness an integral part of each mechanic's day. OSHA Right-to-Know is satisfied and you can rest easy that you have made a significant effort to reduce the risk faced by your mechanics and technicians.

### Integrated Failure Management Through the Life-Cycle of an Asset

Facilligence provides accountability of enterprise and operational risk management initiatives through integrated tracking of workorder incidents, reactive measures, proactive measures, investigations and recommendations. It provides a view of all tracking to any defined level of access, from senior management to mechanics and technicians.

Incidents (including an OSHA 300 report) are documented including root cause analysis and the system automatically reacts with appropriate e-mail notifications (i.e. shut-down coordination), alerts and linked workorder(s) to address the cause rather than the symptom. Diagnostic diagrams, system walk-down steps, repetitive events, failure mode (bath-tub curves), severity trending and remedial actions are all provided. In fact, Facilligence comes with a standard library for failure tracking and analysis.

### More Reasons Hazards Awareness Is for Your Company

- Includes the dynamic NIOSH "4 Diamond in a Diamond" symbol with each hazard.
- Total accountability.
- Tracking & management of all hazards.
- Department wide safety management.
- Summarizes disposal methods for the hazard.
- Links from hazard summaries to workorders.
- Links hazards to:
  - Equipment/Items
  - Buildings, Rooms, & Locations
  - Supplies (parts)
- Helps supervisors follow all regulations (Federal and State).
- Ability to describe Precautions, Treatments, Storage, and Disposal Information.
- Details OSHA limits specific to each hazard.
- Saves synonyms or alternative names with the hazard.
- Catalogs MSDS information for instant retrieval.
- Improved safety performance.
- Reduces the administrative burden which reduces overall cost.

### About Facilligence

Facilligence is a flexible and robust CMMS/EAM/IWMS solution delivered to large enterprise clients as a turnkey solution. This premium product used by premier facilities is capable of managing your needs whether in a single plant or countrywide. Our staff's extensive facility maintenance experience has been incorporated into this program to assure that it meets the wide-ranging user needs for an array of organizations.

Facilligence is a flexible and highly advanced system that enables you to create the look and feel needed to exactly fit your facilities preferences. Use maps, photos, logos and other graphics to build a one-of-a-kind program customized for your facility. Create workorders on equipment items, buildings, departments, sites, building systems, locations, etc. such that every penny spent by the maintenance department is recorded, allocated, tracked and reported. Invoices for individual workorders or for entire projects can be maintained independently within a single global database. Spare parts and inventory levels plus equipment warranty terms and conditions, failure histories and many other parameters are tracked, analyzed and reported.
